## THE METROPOLITAN WATER DISTRICT

OF SOUTHERN CALIFORNIA

306 WEST THIRD STREET LOS ANGELES 13, CALIFORNIA

OFFICE OF BOARD OF DIRECTORS December 16, 1952

**APPROVED** by the Board of Directors of

The Metropolitan Water District

of Southern California its meeting held Dec. 16, 1952

he Metropolitan Water District

Gentlemen:

Board of Directors

of Southern California

Los Angeles, California

The Water Problems and Public Relations Committee has had under consideration a statement, prepared by Mr. Kinsey and submitted to the Committee by General Manager and Chief Engineer Diemer, relative to an educational program having to do with plans being proposed for the importation or local development of large additional water supplies for the area coming within the scope of this District.

At the request of the Committee, a statement indicating the attitude of the District with regard to such proposals has been prepared by Mr. Kinsey and reviewed by General Manager and Chief Engineer Diemer and General Counsel Howard. It has also been reviewed by the Committee and is hereby submitted with the recommendation that it be formally adopted.

Yours truly,

WATER PROBLEMS AND

Warrey Wife

PUBLIC RELATIONS COMMITTEE

Warren W. Butler, Chairman

17/-1

The Metropolitan Water District of Southern California is prepared, with its existing governmental powers and its present and projected distribution facilities, to provide its service area with adequate supplies of water to meet expanding and increasing needs in the years ahead. The District now is providing its service area with a supplemental water supply from the Colorado River. When and as additional water resources are required to meet increasing needs for domestic, industrial and municipal water, The Metropolitan Water District of Southern California will be prepared to deliver such supplies.

Taxpayers and water users residing within The Metropolitan Water District of Southern California already have obligated themselves for the construction of an aqueduct supply and distribution system involving a cost in excess of \$350,000,000. This system has been designed and constructed in a manner that permits orderly and economic extensions and enlargements to deliver the District's full share of Colorado River water as well as water from other sources as required in the years ahead. Establishment of overlapping and paralleling governmental authorities and water distribution facilities to service Southern California areas would place a wasteful and unnecessary financial burden upon all of the people of California, and particularly the residents of Southern California.

December 16, 1952

DEC 17 1932

Mr. A.B.Edmonston State Engineer Sacramento, California

lear or. Monston:

In accordance with our conversation today I am small single herewith the Statement of Policy of The Metropolitan water District of Southern California adopted by its Board of Directors at its meeting on December 16, 1952. Water is something that Bouthern California must have if it is to continue to grow after the supply from the Coloraio River is in full use. Your plan to develop the Feather River project is one that should be considered by both Northern and Southern California. The distribution of water in Southern California should be the function of the Metropolitan Water District for it would be an unfair burden on the taxpayers if other agencies duplicated the works of the Metropolitan Water District to serve the Southern California area.

I have been instructed by our Board to extend to you an invitation to meet with the Board and the staff to discuss this very important question at your convenience.

Very truly yours,

Robert B. Diemer General Manager and Chief Engineer
